

22/01/26 12:11

L'alto spessore consente una maggiore versatilità di posa.

Diventa quindi la soluzione perfetta per tutti gli ambienti in esterno sia quelli che consentono l'uso di collanti, sia quelli con fondi in terra, ghiaia o sabbia.

La posa a colla con metodo tradizionale consente di ottenere superfici estremamente resistenti ideali per sapazi soggetti al passaggio e allo stazionamento di autoveicoli.

Le lastre 20mm possono infine integrarsi con i sistemi di supporto sopraelevati.

The high thickness allows for greater versatility in laying.

It therefore becomes the perfect solution for all outdoor environments both those that allow the use of adhesives and those with earth, gravel or sand bottoms.

The traditional method of glue-laying provides extremely resistant surfaces that are ideal for areas subject to the passage and parking of motor vehicles. The 20 mm slabs can also be integrated with raised support systems.

L'épaisseur élevée permet une plus grande souplesse de pose.

C'est donc la solution idéale pour tous les environnements extérieurs, aussi bien ceux qui permettent l'utilisation d'adhésifs que ceux qui présentent des supports en terre, en gravier ou en sable.

La méthode traditionnelle de collage permet d'obtenir des surfaces extrêmement résistantes, idéales pour les zones soumises au passage et au stationnement de véhicules à moteur. Les dalles de 20 mm peuvent également être intégrées à des systèmes de support surélevés.

Die große Dicke ermöglicht eine größere Vielseitigkeit bei der Verlegung.

Es ist daher die perfekte Lösung für alle Außenbereiche, sowohl für solche, die die Verwendung von Klebstoffen erlauben, als auch für solche mit Erd-, Kies- oder Sanduntergründen.

Die traditionelle Methode der Verleimung liefert extrem widerstandsfähige Oberflächen, die sich ideal für Bereiche eignen, die von Kraftfahrzeugen befahren und beparkt werden. Die 20-mm-Platten können auch in erhöhte Stützsysteme integriert werden.

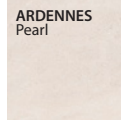

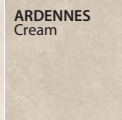

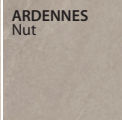

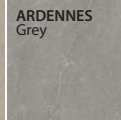

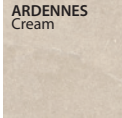

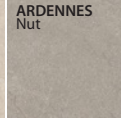

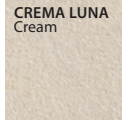

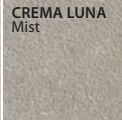

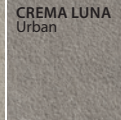

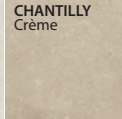

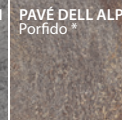

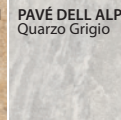

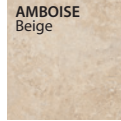

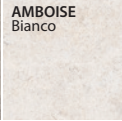

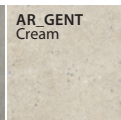

Pavimento . Floor: Indoor
